Art Unit: 2622

1. It should be noted that this application has been transferred to a new examiner due to the classification.

2. Applicant's election with traverse of Group I, claims 1-5 and 22 in the reply filed on 11/29/06 is acknowledged. Thus, claims 6-21 and 23-28 are withdrawn from further consideration on the merits. The traversal is on the ground(s) that "there must be a serious burden on the examiner if restriction is not required". This is not found persuasive because the search for Group I, II,, III, IV, V, VI or VII is a serious burden on the examiner due to different classifications and different subject matters.

The requirement is still deemed proper and is therefore made FINAL.

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

4. The drawings are objected to because Legends are required for block elements in Fig. 1. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any

amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Art Unit: 2622

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4, 5 and 22 are rejected under 35

U.S.C. 102(b) as being anticipated by Sekine et al (US 6,476,869).

With regard to claims 1 and 22, Sekine et al discloses in Figs. 1 and 2, a video camera system which comprises the optical apparatus which has a plurality of functions for controlling the driving of an optical element (video camera 10 includes optical lens 12, col. 3, lines 1-30), first memory storing a default setting data set which includes default setting values for the plurality of functions, the default setting values being non-rewritable (A ROM 32 stores aberration information codes, col. 3, lines 23-26); and a second memory storing a user setting data set which includes user setting values for the plurality of functions (video tape records lens information; where the information is generated by a user so as to control the lens), the user setting values being rewritable based on the default setting values (Fig. 2 shows a system that is used to correct lens information generated by a user so as to correct aberration of the lens, col. 4, lines 1-27; noted that the term "rewritable" is treated as "correctable").

Art Unit: 2622

With regard to claim 2, Sekine et al discloses in Figs. 1 and 2, a video camera system which comprises the second memory stores a plurality of the user setting data sets (the video tape can stores lens information generated by different users).

With regard to claims 4, Sekine et al discloses in Figs. 1 and 2, a video camera system which comprises the user setting value of the user setting data set is transferable to a user setting value of a user setting data set of another optical apparatus (the lens information of the video tape can be copied and thereby to transfer a user settings to another video camera tape).

With regard to claim 5, Sekine et al discloses in Figs. 1 and 2, a video camera system which comprises the optical apparatus according to claim 1, wherein the user setting data set can be initialized to the default setting data set (the lens information with aberration can start a correction process by using aberration correction data of ROM 32, col. 3, lines 22-52).

6. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2622

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Fujii (US 2001/0030707 A1) discloses a digital camera that comprises a ROM storing processing data for a specified taking lens.

Abe et al (us 6,184,925) discloses a digital camera that comprises a color correction memory in an optical lens.
